All of our WWTP and Drinking Water assessments are in RM which include information on the damage level categories and county. The comments should have other details on damage, if any. The water systems that are municipal utility districts will have "MUD" in the PWS (facility) name. We should also be able to filter the WWTPs by type so they get the municipals.

I will contact them to get more details regarding what is needed to see if we actually captured the desired data.

We can give them access to the system, with your approval. I think we would probably need to discuss the permissions on the account(s), since the UT CSR isn't a part of NDOW, and hasn't been really a part of the response, to my knowledge at least.

Do you think it would be worth Mark McCasland having a conversation with them first to see what info they are looking for?

Nic,

Can you assist in the request concerning access to RM?

Please see email below.

Thanks,

Letty

Subject: WWTPs & MUDs: Hurricane Harvey Damage Assessments

Good day,

Brent Porter over at CSR (Center for Space Research, UT), working with Dr. Gordon Wells, is trying to get some damage assessment data for waste water treatment plants (WWTP) and/or MUDs. They are looking for any info we may have on WWTPs or MUD damage assessments by county, or a list of the names of the affected sites or MUDs.

CSR is working with GLO and the Governor's Office on a web-based site to roll-up the damage assessments.

If you have any specific questions for Brent, he is on the CC line.

Thank you all for any information you may have that you can share.

-Paul
